

Save when you use **Generic Drugs**

If you want to lower your prescription drug costs, consider using generic drugs. Choosing generics is an excellent way to save money.

- **Same Quality**

Generic drugs are widely recognized as quality medications. You can expect the same clinical results as brand-name drugs.

- **Lower Cost**

On average, a generic drug costs 50 percent less than the equivalent brand-name drug.

Talk to Your Doctor

The next time your doctor writes you a prescription, ask if a generic is available to help you save money.

Talk to Your Pharmacist

When you take your prescription to the drugstore, tell your pharmacist you would like a generic drug.

Frequently Asked Questions

Are generic drugs safe?

Generic drugs contain the same ingredients as brand-name drugs, but are not manufactured under a brand name or trademark. The color and shape of the generic drug may be different from its brand-name counterpart, but the active ingredients are the same for both. Generic drugs must meet the same Food and Drug Administration quality standards as the brand-name drugs. Generic drugs are available at the lowest copayment.

Why do generic drugs cost less?

Generic drugs tend to cost less than brand-name drugs because the companies that make them do not have to recover the costs of research and development.

Is there a generic drug available for my condition?

Most likely. Many commonly prescribed medications have generic versions. In fact, nearly 65 percent of prescriptions are now filled with generic drugs. Ask your doctor or pharmacist if there is a generic version of your drug. Or, visit the Education Center on the Prescription Drug information page on the Web site indicated on your ID card.

A Good Choice

You should always ask if there is a generic version of your prescription. Remember, when you use a generic drug, you get the same quality as the brand-name drug – at a lower cost.

Below is a sample of drugs and potential savings when you use generics.

Brand Name	Generic Name	Strength	Savings
Adderall	Amphetamine Salt Combo	7.5mg	81%
Allegra	Fexofenadine HCL	60mg	15%
Altace	Ramipril	5mg	22%
Ambien	Zolpidem Tartrate	6.25mg	53%
