

COMMON VARIABLES IN A HIGH-PERFORMANCE NETWORK

High-performance networks are getting a great deal of attention in healthcare today.

It's a good idea to get a clear understanding of what high-performance networks are and what they aren't.

True high-performance networks include providers who consistently deliver both **higher quality** and **lower cost**.

A network can't be high performance if the providers included only demonstrate lower costs like a lot of narrow networks.

CARE DELIVERY

PATIENT CENTERED + EVIDENCE BASED + TRANSPARENT

Quality care is **patient centered**. It follows **evidence-based** practices. And, the measurement standards used to assess and compare outcomes are **transparent**.

X

DATA STRENGTH

BREADTH AND DEPTH OF DATA

Breadth and **depth of data** are essential parts of the quality equation. In order to drive performance that will make a substantial impact on your bottom line, your health plan should have robust claims and utilization data in all markets where your employees live and work.

QUALITY OF CARE

15% OF LARGE EMPLOYERS¹

Today, roughly 15% of large employers have built a high-performance network into their health plan. The number likely will grow in coming years as these networks evolve, mature and deliver better outcomes.
